Loperamide hydrochloride
Simeticone

Read all of this leaflet carefully before you start taking this medicine because it contains important information for you.

Always take this medicine exactly as described in this leaflet or as your doctor or pharmacist has told you.

- Keep this leaflet. You may need to read it again.
- Ask your pharmacist if you need more information or advice.
- If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. See section 4.
- You must talk to a doctor if you do not feel better after 2 days ~~or if you feel worse.~~

What is in this leaflet?

1. What DIARZIL is and what it is used for?
2. What you need to know before you take DIARZIL?
3. How to take DIARZIL?
4. Possible side effects
5. How to store DIARZIL ?
6. Contents of the pack and other information

1. What DIARZIL is and what it is used for?

~~The tablets are used to treat a short lived attack of diarrhoea when it occurs with stomach cramps, bloating and wind.~~

The tablets contain two active ingredients:

- loperamide hydrochloride, which helps reduce diarrhoea by slowing down an overactive bowel. It also helps the body to absorb more water and salts from the bowel.
- simeticone, which breaks up the trapped wind in the bowel that causes cramps and bloating.

The tablets are used to treat a short-lived attack of diarrhoea when it occurs with stomach cramps, bloating and wind.

Mis en forme : Normal, Sans numérotation ni puces

2. What you need to know before you take DIARZIL?

Do not take DIARZIL:

- In children less than 12 years old.
- If you are allergic (hypersensitive) to loperamide hydrochloride, simeticone or any ~~of~~ ~~the~~ other ingredients of the tablets (see section 6).
- If you have a high temperature (e.g. above 38 °C) or blood in your stools.
- If you are having a flare up of an inflammatory bowel condition like ulcerative colitis.
- If you have severe diarrhoea after taking antibiotics.
- If you are constipated or your stomach appears swollen.

~~If any of these apply to you, get advice from a doctor or pharmacist without taking DIARZIL.~~

Warnings and precautions

Talk to your doctor or pharmacist before taking DIARZIL.

- DIARZIL only treats the symptoms of diarrhoea. In some cases, the cause of your diarrhoea may require treatment, if symptoms persist or worsen, please contact your doctor. If you have severe diarrhoea as your body loses more fluid, sugars and salts than normal. You will need to replace the fluid by drinking more liquid than usual. Ask your pharmacist about special powders which replace the sugars and mineral salts.
- If you have AIDS and your stomach becomes swollen, stop taking the tablets immediately and contact your doctor.
- If you have liver disease. Check with your doctor before using-taking the tablets. Some of the side-effects might be more troublesome.
- ~~If you have been told by your doctor that you have an intolerance to some sugars, contact your doctor before taking this medicinal product. This drug contains lactose and patients with rare hereditary problems of galactose intolerance, the Lapp lactase deficiency or glucose-galactose malabsorption should not take this medicine.~~

Mis en forme : Police :12 pt

Mis en forme : Police :12 pt

Adults over 18 years old: Swallow two tablets initially, followed by one tablet after every loose stool (bowel movement). Do not take more than 4 tablets in a day. If you are no better after two days, stop taking the tablets and contact your doctor.

Adolescents (12 to 18 years): Swallow one tablet initially, followed by one tablet after every loose stool (bowel movement). Do not take more than 4 tablets in a day. If you are no better after two days, stop taking the tablets and contact your doctor.

Do not give the tablets to children less than 12 years old.

If you take more DIARZIL than you should

If you have taken too much DIARZIL, immediately seek the advice of a doctor or a hospital. Symptoms may include: heart beat acceleration, irregular heart beat, changes in your heart beat (these symptoms may potentially have serious consequences and engage the vital prognosis), muscle stiffness, uncoordinated movements, drowsiness, difficulty to urinate, respiratory distress, dry mouth, constricting pupils, stomach aches, nausea, vomiting or constipation.

Children react more strongly to high doses of DIARZIL than adults. If a child takes too much or has any of the above mentioned symptoms, immediately contact a doctor.

If you have used or taken too much DIARZIL, immediately contact your doctor, pharmacist or a poison control center.

~~Too many tablets may make you feel drowsy, or make it difficult to think clearly or carry out normal activities. Your muscles may feel stiff or you may experience breathing difficulties. You may have a dry mouth or the pupils of your eyes may become small. You may have stomach pain, feel sick or vomit, be constipated or have difficulty passing water.~~

~~If you have taken too many DIARZIL, contact a doctor or nearest hospital.~~

If you forget to take DIARZIL

Take one tablet after the next loose stool (bowel movement). Do not take a double dose to make up for a forgotten dose.

If you have any further questions on the use of this product, ask your doctor or pharmacist.

4. Possible side effects

Like all medicines, this medicine can cause side effects, although not everybody gets them.

If you experience any of the following stop using the medicine and seek immediate medical help:

Allergic reactions including swelling of the face, tongue or throat, difficulty swallowing, unexplained wheezing, shortness of breath which may be accompanied by skin rash or hives.
